Revision History 7
Chip Revision Identification

Espressif is introducing vM.X numbering scheme to indicate chip revisions.

M – Major number, indicating the major revision of the chip product. If this number changes, it means the software used for the previous version of the product is incompatible with the new product, and the software version shall be upgraded for the use of the new product.

X – Minor number, indicating the minor revision of the chip product. If this number changes, it means the software used for the previous version of the product is compatible with the new product, and there is no need to upgrade the software.

The vM.X scheme replaces previously used chip revision schemes, including ECOx numbers, Vxxx, and other formats if any.

The chip revision is identified by:

- eFuse field EFUSE_RD_MAC_SPI_SYS_5_REG[25:23] and EFUSE_RD_MAC_SPI_SYS_3_REG[20:18]

1 SAR ADC

1.1 The Digital Controller of SAR ADC2 cannot work

Description

The Digital Controller of SAR ADC2 may receive a false sampling enable signal. In such case, the controller will enter an inoperative state.

Workarounds

It is suggested to use SAR ADC1.

Projected Solution

No fix scheduled.
